

MDT of Portland shows amazing results in patient satisfaction study

During 2005-06, NorthWest Rehab Alliance, a network of private physical therapy providers, conducted a survey to rate how patients perceived their treatment. Because an essential part of Mechanical Diagnosis is talking to patients about their progress during treatment, we already knew we were getting amazing results. But even we were surprised by what the survey found.

Two things are made immediately clear: **Treatment at MDT of Portland takes almost half the time than other clinics and results in fewer missed days at work.** Other outstanding data shows greatly reduced pain and increased perception that PT is making improvements for the patient. All of these factors contributed to **patients' unanimous 5 of 5 recommendation rating for all MDT of Portland clinics.**

MDT of Portland has already helped over 7,000 patients with spine related pain, sports injuries, post-operation rehab and body mechanics issues. **With your support, we will continue getting patients results with PT.**

Many thanks,
Nick & Natasha Rinard
